2012 MANUFACTURER SPOTLIGHT

Mansfield Plumbing: The best of all features

ince 1929, Mansfield Plumbing has been manufacturing top-quality, American-made plumbing fixtures for commercial and residential markets. The company's product line includes vitreous china toilets, lavatories and urinals, acrylic air-baths, whirlpools, bathtubs and shower bases.

Mansfield is considered the "brand of choice" for many professionals because of the plumbing fixtures' incredible quality. In addition to high performance, Mansfield's products are also stylish, affordable, efficient and mostly made right here in the United States. It manufactures many high-efficiency toilets that use between 1.28 gpf and 1.0 gpf, along with several dual-flush models. Mansfield even has a water-saving urinal, using only 1 pint per flush. Mansfield's most popular "green" toilets are made here in the U.S., as well.

Made in the USA

More than 75% of Mansfield's products are "Made in America." Mansfield manufactures 4 million pieces each year at its three U.S. facilities (2 million ceramic pieces), making the company one, if not the largest, domestic producers of sanitary ware. It is one of only three manufacturers still operating vitreous china factories in the U.S.

Mansfield proudly employs more than 500 Americans, including skilled modelers who require three to four years of training before they become proficient at creating the molds that make plumbing fixtures out of vitreous china. Beyond appearance, the real challenge is producing a mold that provides the correct shape and dimensions as the pieces shrink approximately 12.5% during the firing/kiln process. The average employee at its Perrysville, Ohio plant has worked there 20 years.

A majority of the raw materials used by Mansfield for its sanitary-ware products are from the Midwest, including all clays, feldspar, plaster and flint.

High-efficiency

In the last decade, Mansfield has launched an extensive line of cutting edge, highefficiency toilets to help customers reduce water consumption without sacrificing flush performance.

Innovative

In 2012, Mansfield has unveiled a variety of new products that include its first walk-in tub, the first truly rimless, high-efficiency toilet and its newest addition to the "Affordable Style" bathroom suite product line.

Mansfield's product development team works tirelessly to invent better-performing plumbing fixtures while still maintaining affordable price points. In the last decade, Mansfield has launched more than 100 new products.

Affordable

Mansfield's leaders believe that highperforming products don't have to be expensive and make sure all company's products are affordable. Even its highefficiency and high-design fixtures are priced at 30-plus % less than its major competitors. This affordable luxury, or as Mansfield calls it "affordable style," makes it easier for homeowners to add spa-like amenities to their bathrooms - not to mention the end users cut water consumption.

Mansfield makes it possible for its customers to have top-quality, Americanmade products with appealing designs that are "green" and affordable. For more information on Mansfield and its products, visit www.MansfieldPlumbing.com.

Rebuilding America

One toilet at a time.

In 2012, Mansfield Plumbing Products will manufacture approximately 2 million pieces of sanitaryware in our U.S. facilities. That makes us one of, if not the largest U. S. producer of vitreous china fixtures. Mansfield will put more Americans to work in 2012 than we did the year before. Our company is proud to make good quality toilets, lavatories and urinals and stamp them "Made in the U.S.A."

American Muscle is not only about our U.S. workforce. It's also about our outstanding flush performance. Just ask a Mansfield Representative or Distributor about our dramatically improved MaP ratings.

Made in America - Outstanding Flush Performance

That's American Muscle!
