Low-flow toilets available in affordable styles

Mansfield Plumbing Products launched two new high-efficiency toilets (HET) in April.

Both Montclair HET and Essence HET use only 1.28 gallons per flush (gpf), and complement the current fixtures in the Essence and Montclair Suites.

The suites are part of Mansfield's "Affordable Style" collection, and include matching toilet, sink and tub options in a variety of design styles. The Montclair and Essence suites' original toilets use 1.6 gpf.

An older toilet may use up to 3.5 gpf, so cutting the water use in half with each flush can significantly lower utility bills.

"Over the last few years, we've worked tirelessly to create water-saving versions of our most popular products without sacrificing on flushing power and overall performance," said Charles Scott, vice president of marketing for Mansfield Plumbing.

In addition to using only 1.28 gpf, the new HETs also:

- Feature concealed trapways for easier cleaning
- Comply with ADA requirements
- Have 3-inch flush valves that deliver faster tank emptying rates, resulting in better flush performance
- Include jet and hydraulic enhancements that virtually eliminate clogs
- Consistently shut off over a wide range of water pressures thanks to pilot-operated fill valves
- IAPMO / Map certified to flush 800 grams (Essence HET pending certification)
