Easy Does It

New toilet designs and accessories

DESIGNED TO MAKE installers' lives easier, new toilets and plumbing accessories help cut down on potential problems and callbacks. From toilets and wall-mount frames that require few tools and connections, to a new universal gasket that does away with wax, plumbers' and bath installers' new favorite products could be right on this page. —Lauren Hunter

High Point

The popular Summit 3 toilet is now available as a dual-flush unit. With 1.1- and 1.6-gallon flushing options, the toilet can move up to 800 grams of material. Three configurations are available — ADA, elongated, and round-front — and a three-bolt installation helps eliminate tank-to-bowl leaks. The WaterSense-compliant Summit can help users reduce water use by 20%. **Mansfield Plumbing** | 877.850.3060 | mansfieldplumbing.com

Turning Japanese

Recently arrived in the U.S. from Japan, the Eco-X Series uses 100% of the water with each flush to completely clean the bowl from the top down. The Vortex flushing system discharges water all at once, circulating it beneath the rim for a whirlpool cleaning effect using just 0.8 gallons per flush. One- or two-piece models are available, featuring fully skirted bowls, low-profile tanks, or elongated fronts. **Inax** | 424.237.1031 | inax-usa.com

Back to the Wall

With just four connections in all and a design that fits standard 2x4 or 2x6 studs, the In-Wall Carrier System simplifies wall-hung toilet installation. The system can accommodate 15- to 19-inch seat heights and has a steel frame that supports up to 880 pounds. All working parts are easily accessed for maintenance through the flush panels. **Geberit** 847.803.7704 | geberit.us

Look, Ma, No Tools!

Designed to be installed with simple hand-tightening, all you need to install a Saver toilet is right in the box. Available in one- or two-piece models, the Saver fits elongated comfort into a standard space and features an EverClean permanent surface to inhibit growth of bacteria, mold, and mildew. Available in a WaterSense-certified high-efficiency model that uses just 1.28 gpf. **American Standard** | 800.442.1902 | americanstandard.com

SPOTLIGHT: TOILET GASKET

Bye-Bye, Ball of Wax

Made from polyurethane foam that conforms to any toilet-setting situation, the **Sani Seal toilet gasket** offers trouble-free installation, the maker says. The flexible material is designed to hold bolts upright to help ensure placement but is flexible enough to allow for repositioning.

The Sani Seal gasket:

- Accommodates all flanges on the market
- Creates a water-tight seal
- Works when the gasket sits between ⅛-inch below and ⅜-inch above the finished floor, or
- Can be stacked to fill wide gaps without risk of clogging or caving
- Eliminates the need for messy wax
