PREVIEW

Tankless water heater components

1 A. O. Smith's tankless product line will now include remote controllers and/or power cords with every residential tankless water heater purchase. Indoor residential tankless units will come with a remote controller and power cord. Due to varying installation regulations from state to state, outdoor residential tankless units will come with just a remote controller. This not only makes installation easier, it decreases the amount of time spent on the jobsite for the contractor. Prices for the tankless line will remain the same.

Stainless-steel kitchen sinks

2 The new appliance sink now available in the Prevoir Collection from American Standard includes a series of traditional single-, double- and even triple-bowl sinks in both undermount and top-mount options. Prep sinks, laundry/utility sinks and unique styles such as corner-mount sinks and round or oval vanity basins are also available in the same brushed stainless steel. Also available are a cutting board and colander, which integrate seamlessly into the sink itself.

Lead-free point-of-use valves

3 Bradley introduces the S59-4016 Series lead-free thermostatic mixing valves to its Navigator line, which is said to be the first lead-free valves to meet the 0.25% lead content and lead-free requirements in plumbing fixtures that carry drinking water. Navigator valves are known for easy set-up and start-up with a single valve.

Rimless HET

4 Mansfield Plumbing introduces the Cascade, a rimless toilet that makes cleaning quick and easy. It is also high efficiency and uses only 1.28 gpf while flushing 800 grams — virtually eliminating clogging. Its strong swirling action is said to clean the bowl with every flush.

Shower surface drying systems

5 Tjernlund Products introduces the Sure Dry shower dryer systems to minimize mold and mildew damage. Designed for installation during new construction or remodeling, they feature a remote fan unit connected via a flexible duct within the wall to an unobtrusive 4" round supply grille installed near the bottom of the shower wall. These unique systems quietly circulate dry air from an adjoining room, closet or cabinet into tiled showers to reduce drying time of caulk, grout, tile and glass surfaces up to 80%. Two different models are available, Model SD140 and Model SD200. Both systems include a 10-60 minute digital wall-mount timer.
